Education

Sahyadri College Of Engineering And Management Aug 2023 - Present

Bachelor of Engineering in Computer Science – 8.9 CGPA *Mangaluru, Karnataka*

Experience

Infosys Springboard Jan 2026 - Mar 2026

Full Stack Developer Intern

- Developed a skill-based matching feature in Django to connect freelancers with relevant job opportunities, improving hiring efficiency.
- Built REST APIs using Django to handle authentication, job postings, and applications connecting the frontend with the database.

Projects

SpringFitAI | *Java, Spring Boot, RabbitMQ, Google Gemini API, Eureka*

- Built a microservices-based fitness platform (User, Activity, AI services) in Spring Boot, using RabbitMQ to decouple workout tracking from asynchronous Gemini-based AI recommendation generation.
- Implemented JWT-based authentication : BCrypt password hashing at login and token issuance in the User Service, with signature and expiry verification centralized in a custom API Gateway filter.
- Set up Eureka for service discovery and Spring Cloud Config for centralized configuration, with the Gateway propagating a trusted user identity to downstream services via a custom header after verifying each request.

EventSphere | *Node.js, AWS (EC2, ECR, SNS, Lambda, SES), Docker, Nginx*

- Built a full-stack event registration platform; prevented seat overbooking using PostgreSQL transactions with row-level locking.
- Containerized a 4-service stack with Docker and deployed to AWS EC2 via ECR, using Nginx as a single-entry reverse proxy.
- Designed a serverless SNS → Lambda → SES pipeline that fires only after successful database commits, preventing false confirmations.
- Secured admin routes with JWT authentication and bcrypt password hashing, isolating event management from public access.

SDN cloud optimizer | Python, Mininet, Ryu, OpenFlow

- Adapted a nature-inspired optimization algorithm (AVRO) to intelligently select the best VM for cloud tasks based on CPU, memory, queue, and delay.
- Exposed the scheduler as a REST API and integrated it with a simulated SDN network (Mininet + Ryu) for real-time traffic routing.
- Benchmarked the algorithm against standard scheduling methods (Round Robin, Least Loaded, FCFS) across multiple traffic patterns.

Technical Skills

Languages: Python, Java, JavaScript, SQL, HTML, CSS
Frameworks & Libraries: Spring Boot, Node.js, langgraph
Databases: PostgreSQL, MongoDB, MySQL
Cloud & DevOps: AWS (EC2, ECR, SNS, Lambda, SES), Docker, Nginx
Developer Tools: Git, Postman, VS Code, Vite

Achievements/Contributions

Open Source Contribution

- Contributed bug fixes to open source projects including resolving a race condition in a Node.js file transfer tool (filedrop) involving async shutdown, stream lifecycle management, and regression testing.

SIH 2025

- Developed an ML-based image recognition solution for automated breed identification of Indian cattle and buffaloes (Problem Statement SIH25004).
